3dmark cloud gate benchmark

Pretty and quick little test you can enjoy running smoothly.. Good for testing laptops!. *Part of 3DMark. I have a fair few items in my library. Some I have played, a lot not even installed. So from now on I will install, and play each item for at least an hour.

These will be my first impressions not full on reviews as an hour is not a great deal of time. So please keep this in mind. Also keep in mind these are MY impressions I do not expect you all to agree so don't shoot me.

For me 3DMark is a good little program for checking what your pc can do. That's it to be honest. Yes when it's checking your GPU the videos are great to watch, but once you watched once well you seen it.

The only reason I have over 3hrs on this, is that I left it running while I went out one day.

Do I recommend this hmm tough choice. If you tinker often with your GPU setting etc. than yes it's a nice looking program. If you're not and you just want to see what your GPU can do then no. You will use 2 or 3 times and then like me you're happy with your settings that's it.

So if you can get this at a heavy reduced cost, then get it. If not they are plenty not so pretty programs out there, that do the same job for free.
. Is this a re-brand of the Sling Shot benchmark. Looks familiar.. \udb40\udc21
